 Grand Champion
 Horned Hereford Bull
 Owned by Barber Ranch, GKB Cattle,
 Colyer Herefords, Curry Herefords and
 Express Ranches

Sale schedule
3.21.2024

The sale bulls will be at the GKB Cattle Sale Headquarters in Desdemona, Texas, for viewing beginning Monday, March 18th.
 If you would like to view the bulls prior to that day, please contact either GKB Cattle or Barber Ranch.
 You are more than welcome to view the bulls at either ranch at your convenience.

THURSDAY, MARCH 21

Doughnuts, juice and coffee will be available all morning.

Lunch will be served at 11 a.m.

Sale begins at 12 noon.

in Desdemona

GARY & KATHY BUCHHOLZ

Welcome to GKB Cattle!

Dear Friends,

It is with great pleasure that we welcome you to our Second Annual Bull Sale with Barber Ranch. GKB Cattle and the Barber Family have worked diligently together to create an offering that we are both proud of. We have enjoyed our friendship and partnership with Barbers over the past years and are excited to have the opportunity to team together and offer these Hereford bulls to customers. In addition to our Hereford bulls, GKB Cattle is excited to add both Black and Red Angus bulls to the lineup for this year.

We have had an exciting year in 2024 so far and look forward to what the rest of the year will bring. We started off with again having the Grand Champion Pen of 3 Hereford Bulls at the National Hereford Show at Cattlemen's Congress in Oklahoma City in January.

We are very proud of the bulls that make up this offering, as the quality runs deep. Phenotypically, they are stout and rugged bulls that are ready to go to work in the pasture. The bulls have been through a stringent selection process, where emphasis is put on structural integrity, muscularity, real-world performance, and fleshing ease. It has also always remained our priority that they must start with good feet and legs.

When making our selections at GKB, we have always placed a strong emphasis on the maternal aspect of our herd sire battery. We believe that every great breeding bull is backed by an even better female. Maternal stability increases performance, fertility, and longevity, all of which are essential traits of the modern-day beef production cycle. Through focusing on superior sire selection, we can achieve these traits.

Our program is geared toward producing cattle that are profitable for the entire industry. We have an extensive ET and AI program that gives us the ability to be very selective with our matings, enabling us to continue to produce superior genetics. We also utilize individual performance records, ultrasound and testing on our bulls to ensure that what we offer is something we can stand behind. We put a large emphasis on producing bulls with exceptional EPDs and are able to create **a great selection of both calving ease and performance bulls** to choose from.

Come early and view what we have to offer your program. Videos of the sale bulls are available at bid.superiorlivestock.com. We are offering herd bulls for purebred operations as well as bulls designed to perform in commercial herds throughout the United States.

We truly believe that the individuals in this offering have a ton of potential to be sires with true impact and influence within the beef business. Your success is our success! We want to also thank all our customers for your continued support, as we wouldn't be able to do this without you. We can't wait to see you in Desdemona!

Welcome from Barber Ranch!

Fellow Cattlemen and Cattlewomen,

Welcome to the 2nd Annual GKB Cattle & Barber Ranch Spring Bull Sale! We are excited about the set that we are bringing to Desdemona this year. We are extremely fortunate to be partners with some of the best people in the cattle industry, including Gary and Kathy Buchholz of GKB Cattle. We encourage you to come out to the GKB headquarters in Desdemona, Texas, and view this set in person.

Barber Ranch has been family owned and operated for 120 years now. Three generations are currently involved in the day-to-day operations of the ranch. Our passion as a family has always been the cattle business and specifically Hereford cattle. It has remained our goal over the years to raise functional, efficient, maternal and useful cattle for all parts of the industry. We enjoy standing at the backdrop as much as anyone, but the true heart of our operation focuses on the needs of the commercial cattlemen.

These bulls in the offering have surfaced to the top through phenotype, EPDs, genotype and performance. All of the Hereford bulls selling are DNA tested and have genomically enhanced EPDs, exponentially improving their accuracy to predict how their progeny will perform before ever turning them out. In addition to their EPD profiles, all bulls have been ultrasounded to help predict carcass traits and performance on the rail. We have provided this data to make it easier to select the best genetics for your operation. Phenotypically, we have continued to select cattle with eye appeal and great phenotype. We breed our cattle to have more muscle, body, bone and style than the typical Hereford herd.

Barber Ranch bulls are developed mostly on native grass pastures and provided a limited supplemental ration so they are in the proper condition to start working immediately. There is a variety of horned, polled and homozygous polled bulls to choose from in this offering.

We encourage you to invest with confidence, knowing that **your purchases are backed by a 100% satisfaction guarantee**. With the opportunity to buy from two of the most prominent US breeding programs in one place, there is no better time to strengthen your herd. Selecting high performing, efficient bulls to sire your next calf crop is an important economic decision that **YOU** can control.

We are so thankful for all of our past and future customers. Please feel free to reach out to any member of the Barber family or sale staff to help make your selections. Whether you can join us in person or plan to purchase from afar, we are committed to helping you make the best decisions. We look forward to seeing you in Desdemona!

If you are unable to attend the sale, please log on to bid.superiorlivestock.com for online bidding (see page 6), or give us a call and we can assist you with your purchases.

GKB CATTLE & BARBER RANCH SALE TERMS & CONDITIONS

TERMS: Cash or check. Cattle will be sold to the highest bidder. The auctioneer shall settle any disputes as to bids. All cattle are to be paid for by the purchaser during or immediately following the sale and will not be released until after settlement has been made. Each animal will be at the purchaser's risk immediately after it is sold.

HEALTH: The health of the cattle selling is excellent. Each animal will be accompanied by an individual health certificate for immediate interstate shipment. **Note:** If bulls should go to a state that requires additional testing, bulls will be delivered to the new owner after testing is completed.

GUARANTEE: Unless stated otherwise, each bull will sell under the Suggested Terms and Conditions of his respective breed association.

BREEDING GUARANTEE: Bulls sold in this sale are fertility tested and are guaranteed by the owners to be breeders, provided they are properly handled and cared for by the purchaser. Any bull failing to breed after a trial of six months may be returned to the seller **if in good condition**. The seller reserves the right to try said bull for six months, and if he proves a breeder to return him to the buyer at buyer's expense. If the bull proves a non-breeder, the bull will be replaced or credit will be issued for the next year's sale at the purchase price minus salvage value of the bull. Seller is not liable for bulls lost due to injury or death.

ANNOUNCEMENTS: Announcements made sale day from the auction block will take precedence over statements in the catalog or other advertising. We reserve the right to withdraw any sale lot not meeting our specifications prior to sale time.

LIABILITY: All persons who attend the sale do so at their own risk. Neither the owners nor any other persons connected with the sale assume liability, legal or otherwise, for accidents or loss of property. As the sale manager, Layton Auction Services, LLC is only an agent for the seller and has no responsibilities other than those involved in conducting the sale.

GKB Cattle and Barber Ranch reserve the right to collect, freeze and use semen within their respective herds on any bull sold in this sale. Semen collection would be done at GKB Cattle or Barber Ranch's expense and the buyer's convenience.

GKB Cattle and Barber Ranch reserve all cloning rights on all bulls selling.

We have made preparations to bid and buy livestock through Superior Livestock Auction for buyers unable to attend in person on sale day. Please note that all of the lots in the sale will also be available for viewing online prior to and sale day at: bid.superiorlivestock.com

ABSENTEE BIDDERS:

HOW TO PARTICIPATE ON THE PHONE OR ONLINE

Viewing the Auction Online. The auction will be broadcast online at Bid.SuperiorLivestock.com. The pre-recorded videos will also be hosted there prior to and on sale day. You do not need an account or login just to watch the auction.

Online Bidding. Go to Bid.SuperiorLivestock.com for Superior's new online bidding platform. If you have not registered there before, you will need to create an account if you wish to bid (there is no registration required just to watch the auction). Once you have created an account, request a buyer number and you will then be able to bid online with the largest and most trusted cattle marketing entity in North America. Superior's new platform allows you to see both the live stream of the auction AND the pre-recorded videos on one screen at the same time!

Turn in Bids Over the Phone. This is Superior's suggested bidding method for anyone who does not have consistent, high-speed internet. You still must register an account at Bid.SuperiorLivestock.com and request a buyer number; upon doing so, you will see the bid line phone number. Just watch the auction online and call in at least two lots ahead of the lot you are looking to bid on.

Buyers will be contacted by the ranch after the sale for payment and delivery details.

FOR HELP WITH REGISTRATION OR ANY PART OF THE BIDDING PROCESS,

PLEASE CALL SUPERIOR AT (800) 422-2117.

ALL BULLS IN THIS SALE QUALIFY FOR SUPERIOR PROGRESSIVE GENETICS

Superior Progressive Genetics (SPG) is a Value Added Program launched by Superior Livestock Auction to create a premium for commercial cattlemen when they sell calves on Superior by identifying load lots of cattle sired exclusively by bulls purchased directly from qualified seed stock producers. SPG brings attention to the investment commercial cattlemen have made by doing business with leading seed stock producers. GKB Cattle and Barber Ranch along with their bull buying customers will be recognized by branding the SPG icon and the GKB Cattle or Barber Ranch logo on qualified load lots as the cattle sell on Superior's video sales live on television and the internet. In addition to the qualified lots being identified on television, the lots will also be branded as "SPG" in Superior Livestock Auction's print and web sale catalogs.

Additional Benefits to Commercial Cattlemen Selling on Superior:

- ✓ Doing business with a reputable company who has your best interest in mind.
- ✓ Superior ties the commercial and purebred cattle industry together full circle.
- ✓ Largest cattle auction in North America along with the largest active buyer list.
- ✓ Can sell on contract to take advantage of current market conditions and deliver at a later date.
- ✓ Established premiums for cattle on good health programs.
- ✓ Established premiums for many Value Added Programs.
- ✓ Cattle are sold "country fresh" direct from the ranch, resulting in less stress.
- ✓ Seller determines weighing conditions.
- ✓ Seller does not have the expense of trucking.
- ✓ Payment is guaranteed to sellers through Superior's bonded custodial account.

For more information, contact Superior at (800) 422-2117

or visit www.SuperiorLivestock.com.

Hughes Trailers

Building Custom Trailers and Flatbeds since 2005
25900 I-27, Canyon, Texas • (806) 499-3113

Call for Pricing or Availability

Website Updated Daily
www.HughesRanchTrailers.com

Attention: Bull Buyers

WIN A HUGHES TRAILER!

A custom built trailer will be given away at the conclusion of the sale. Your buyer number will be entered in a drawing each time you purchase a bull in this sale. The number drawn will be the recipient of a custom built trailer manufactured by Hughes Trailers in Canyon, Texas. The more you buy, the more chances you have to win! Need not be present to win.

Using EPDs as Selection Tools

Cattle Evaluations use the term Expected Progeny Difference (EPD) to express genetic transmitting ability of a sire for the various traits listed. An EPD is a prediction of how future progeny of a sire are expected to perform in a particular trait, relative to other sires in the analysis. The key word is “difference.” The EPD itself does not imply “good” or “bad” performance; rather, the EPD gives a prediction of the average “difference” to expect in the performance of a sire’s progeny relative to other sires in the same analysis.

The EPD for a given trait on each animal in the analysis is compared to every other animal in the analysis. The EPD is reported as a plus or minus value in the unit which the trait is measured. EPD accuracies on non-parent animals are relatively low and are not reported in this catalog. The American Hereford Association (AHA) currently produces expected progeny differences (EPDs) for 17 traits and calculates three profit indexes. AHA’s genetic evaluation makes use of a Marker Effects Model that allows the calculation of EPDs by incorporating the pedigree, phenotypic and genomic profile of an animal.

Hereford EPDs and \$ Indexes included in our sale catalog are:

Calving Ease Direct (CED) Based on calving ease scores and birth weights and measured on a percentage. CED EPD indicates the influence of the sire on calving ease in females calving at two years of age. For example, if sire A has a CED EPD of 6 and sire B has a CED EPD of -2, then you would expect on average if comparably mated, sire A’s calves would be born with an 8% more likely chance of being unassisted when compared to sire B’s calves.

Birth Weight EPD (BW) An indicator trait for calving ease, measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A’s calves would come 3 lb. heavier at birth when compared to sire B’s calves. Larger BW EPDs usually, but not always, indicate more calving difficulty.

Weaning Weight EPD (WW) An estimate of pre-weaning growth, measured in pounds.

Yearling Weight EPD (YW) An estimate of post-weaning growth, measured in pounds.

Scrotal Circumference EPD (SC) Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull’s own semen quantity and quality and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty.

Maternal Milk EPD (Milk) The milking ability of a sire’s daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires’ daughters’ progeny due to milking ability. This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk + Growth EPD (M+G) Reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters’ progeny weaning weight. It is equal to one-half the sire’s weaning weight EPD, plus all of his Milk EPD.

Calving Ease Maternal (CEM) Predicts how easily a sire’s daughters will calve at two years of age and measured on a percentage. For example, if sire A has a CEM EPD of 7 and sire B has a CEM EPD of -3, then you would expect on average if comparably mated, sire A’s daughters would calve with a 10% more likely chance of being unassisted when compared to sire B’s daughters.

Udder Suspension (Uddr) Udder EPDs are reported on a 9 (very tight) to 1 (very pendulous) scoring scale. Differences in sire EPDs predict the difference expected in the sires’ daughters’ udder characteristics when managed in the same environment.

Teat Size (Teat) Teat EPDs are reported on a 9 (very small) to 1 (very large, balloon shaped) scoring scale. Differences in sire EPDs predict the difference expected in the sires’ daughters’ udder characteristics when managed in the same environment.

Carcass EPDs

Carcass records are adjusted to an age constant endpoint. Therefore, selection based on any or all of the carcass merit EPD is comparable among cattle at the same age endpoint. For example, selection based on increased EPD for carcass weight will result in heavier carcass weights than those animals with lower EPD for carcass weights when the cattle are harvested at the same age.

Carcass Weight EPD (CW) Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight.

Ribeye Area EPD (REA) REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also

American Hereford Assn. EPD Averages for 2021- & 2022-born calves:

CED	BW	WW	YW	SC	Milk	M+G	CEM	Uddr	Teat
+3.0	+2.7	+55	+88	+1.0	+26	+54	+2.0	+1.2	+1.2
CW	REA	Marb	BMIS	BIIS	CHBS				
+69	+42	+13	+347	+420	+118				

incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling Score (Marb) Marbling EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat (IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher Marb EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

\$Profit Indexes

Baldy Maternal Index (BMIS) The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed toward Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake but a positive weighting on Carcass Weight, which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS) The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed toward a commodity beef market, since Certified Hereford Beef does not accept Brahman-influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk, which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake but a positive weighting on Carcass Weight, which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers who use Hereford bulls on Brahman-influenced cows.

Certified Hereford Beef Index (CHBS) The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well, there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Ribeye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

EPDs are updated weekly by the American Hereford Association, so we cannot guarantee the EPDs listed in the catalog. The Hereford EPDs printed are from the 2/12/24 evaluation of the AHA. View up-to-date EPDs at www.hereford.org.

Genomic-Enhanced EPDs The accuracy of breeding values in young cattle is enhanced with DNA testing. All EPDs included are genomically enhanced for the advantage of enhanced accuracy.

Actual birth weight is included in addition to adjusted 205-day weaning weight, adjusted 365-day yearling weight (if available), adjusted 365-day ribeye area, and adjusted 365-day intramuscular fat score.

Pigmentation scores are included for Left Eye, Right Eye and Scrotal.

HEREFORD ADVANTAGE

Visit

HerefordAdvantage.com

to get started today!

An industry-changing program from the American Hereford Association and IMI Global to verify and add value to Hereford-influenced feeder cattle with superior genetics, health and management.

REQUIREMENTS

- **Source & Age verification**
- **Genetic merit**
 - Minimum of 50% Hereford genetics
 - Bull battery ranking in top 50% of breed for \$CHB index (bull battery average)
 - Bull ownership transferred (all bulls)
- **Vaccination program – two rounds of vaccinations pre-weaning (minimum)**
 - *Recommended minimum protocol:*

**PrimeVAC[™] 34**
PREMIUM
BY MERCK ANIMAL HEALTH

- **BQA certification**

BENEFITS

- **Genetic improvement tool**
 - **Sire EPD and profit index summary**
- **Added market exposure**
 - **Free listing at HerefordMarketplace.com**
- **Enrollment cost - \$3.00/hd.**
(verification + eID tag)

Look for this logo in Hereford bull sale catalogs to identify sires meeting the genetic requirements for the Hereford Advantage program.

- L120 is a unique herd sire prospect when you evaluate his combination of pedigree, data, and phenotype. He is a short marked, dark red son of the \$290,000 record-selling C GKB Guardian 1015 ET with exceptional style and eye appeal. L120 has excellent athleticism. He is balanced from the side and ring eyed with a big hip, depth of rib and extension in his front one-third.
- His donor dam is a young daughter of the 2018 NWSS Supreme Champion Polled Female, BR Amber 6089. G029 is a full sister to BR Kronk G036 ET.
- Ranks in the top 2% for YW, top 4% for CW, top 5% for WW, and top 7% for M&G and CHB.

- Incredible build and design in this conservative marked, goggle-eyed son of Churchill Desperado 029H. 2146 is athletic with flawless structure plus extra shape and style. Combining his numerical profile with his phenotype elevates his status to a herd sire that does a lot of things really well.
- His mother is a striking young Endure daughter that stems from the BR Terri 9130 donor that is a foundation female for Barber Ranch and Express Ranches.
- Ranks in the top 1% for WW, top 2% for YW and M&G, top 3% for CW, top 6% for Milk, top 7% for CHB, top 10% for SC.

- Rugged in his design with added eye appeal, this well-balanced bull is long and level in his hip design. A true performance bull with breed-leading growth and look, he is the stoutest boned, most massive stifted bull in BR offering.
- His mother, BR Anastasia G012 ET, is an exceptional young donor that was a featured lot in the GKB and Barber Female Event in December, commanding \$30,000 for 1/2 embryo interest.
- Ranks in the top 1% for YW and CW, top 2% for WW, top 3% for M&G and CHB.

- Exceptional look and build in one of the first sons of BR GKB Everest H018 we have offered. This bull is square hipped, balanced on the profile with shape and is extended through his front one-third. If you are in the market for a herd sire that has the potential to raise top end females, then you should take a hard look at 2375.
- Dam is an own daughter of Sooner out of CSF 18U Olivia 2102. A maternal sister to 2375 was the 2023 NAILE Champion Open Hereford Female in Louisville, KY.
- Ranks in the top 5% of the breed for REA.

- Ranks in the top 2% of the breed for SC.

THE POWER OF BLACK. ONLY BETTER.

HEREFORDS—THE EFFICIENCY EXPERTS

Adding Hereford genetics to your herd makes perfect business sense in a cost-driven economy. Excellent conversion, hardiness, fertility, longevity and even disposition can help reduce input costs. These Hereford efficiencies are ideal for your herd, your business and your plans for the future. Low-maintenance cattle, long-term profit. Now that's power.

Angus bulls...lots 101-127

American Angus Assn. Selection Tools

Expected Progeny Difference (EPD) is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I" and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

Angus EPDs and \$Value Indexes included in our sale catalog are:

Calving Ease Direct (CED), expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Scrotal Circumference (SC), expressed in centimeters, is a predictor of the difference in transmitting scrotal size compared to that of other sires.

Docity (Doc) expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docity in a sire's offspring compared to another sire.

Heifer Pregnancy (HP) is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM), expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk (Milk), expressed in pounds of calf weaned, is a predictor of a sire's genetic merit for milk and mothering ability in his daughters. In other words, it is the part of the calf's weaning weight attributes to milk and mothering ability.

Carcass EPDs

Carcass Weight (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

American Angus Assn. Spring 2024 EPD Averages for non-parent bulls:

CED	BW	WW	YW	SC	Doc	HP	CEM	Milk
+6	+1.2	+63	+112	+87	+18	+12.2	+9	+27
CW	Marb	RE	\$M	\$W	\$F	\$G	\$B	\$C
+50	+69	+65	+63	+59	+88	+53	+144	+250

\$Value Indexes

\$Value Indexes, expressed in dollars per head, are multi-trait selection indexes where a higher value suggests more profit. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning by decreasing mature cow size and improving docility, foot structure and fertility while maintaining weaning weights consistent with today's production.

Weaned Calf Value (\$W), expressed in dollars per head, provides the expected difference in future progeny pre-weaning performance from birth to weaning.

Feedlot Value (\$F), expressed in dollars per head, is the expected average difference in future progeny performance for post-weaning feedlot merit (growth and feed efficiency) compared to progeny of other sires assuming producers retain ownership of cattle through the feedlot phase and sell on a carcass-weight basis.

Grid Value (\$G), expressed in dollars per carcass, is the expected average difference in future progeny performance for carcass grid merit, including quality and yield grade attributes, compared to progeny of other sires.

Beef Value (\$B), expressed in dollars per carcass, represents the expected average differences in the progeny post-weaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot and sell on a carcass merit grid.

Combined Value (\$C), expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid.

EPDs are updated weekly by the American Angus Association, so we cannot guarantee the EPDs listed in the catalog. The Angus EPDs printed are from the 2/9/24 evaluation of the AAA. View up-to-date EPDs at www.angus.org.

Genomic-Enhanced EPDs The accuracy of breeding values in young cattle is enhanced with DNA testing. The Angus EPDs in this catalog that are genomically enhanced are indicated by the AGI GE-EPD symbol.

All Angus bulls in this sale meet the American Angus Association's minimum requirements to qualify for the CAB® program!

BUY BULLS ON TARGET

The Targeting the Brand logo is designed to highlight registered Angus bulls with greater genetic potential to produce calves meeting the most challenging specifications of the Certified Angus Beef® brand. Bulls must meet genetic requirements of +.65 Marbling EPD and +55 \$Grid for non-parent Angus sires to qualify for use of the Targeting the Brand™ logo. Sire-identified carcass data from more than 8,600 records in the American Angus Association database show these minimum thresholds for Marbling and \$G achieve an average of 50% CAB acceptance. While a sire's genetic potential only accounts for a portion of marbling performance in a calf crop, these benchmarks provide commercial cattlemen a starting place to identify genetics that will go on to bring performance premiums on quality beef grids. Cattlemen choosing to make more significant carcass advancement or those already achieving 50% or higher CAB acceptance may set bull selection criteria above Targeting the Brand™ baselines.

Genetic Recommendations:

	Value
Marbling EPD (Marb)	+ .65
Dollar Grid Carcass Index (\$G)	+55
